RESCHEDULED
NOTICE OF A PUBLIC HEARING
POST OAK SAVANNAH GROUNDWATER CONSERVATION DISTRICT
January 19, 2023, 5:30 P.M.
Post Oak Savannah Groundwater Conservation District Offices
310 East Avenue C, Milano, Texas 76556

The Board of Directors of the Post Oak Savannah Groundwater Conservation District (District) is rescheduling a public hearing in the Post Oak-Savannah Groundwater Conservation District Offices, 310 East Avenue C, Milano, Texas 76556, from Tuesday, January 10, 2023, at 5:30 P.M. to Thursday, January 19, 2023 at 5:30 P.M., for the purpose of receiving public comments on the following applications:

Notice is hereby given of the following public hearing that will be held at the time and place listed above on the following applications, to-wit: an Application for a New 9,000 acre-feet per year (af/yr) Simsboro and Hooper Drilling and Operating Permit, and an Application for a New 15,000 af/yr Simsboro Operating Permit.

SLR Property I, LP (SLR), whose address is: 2825 Oak Lawn Avenue, Dallas, TX 75219. SLR submitted these applications on October 17, 2022.

SLR requests a new Drilling and Operating Permit to produce up to 9,000 af/yr from the Simsboro formation, and up to 4,500 af/yr from the Hooper formation, provided that the total production in any one year may not exceed 9,000 acre-feet. SLR requests authorization to drill and operate up to a total of 60 new wells (up to 30 new Simsboro wells and up to 30 new Hooper wells), at 30 defined well sites. Figures 1 and 2 included as part of this notice show the locations of the 30 proposed new Simsboro wells (identified as OP9-1 through OP9-30) and the 30 proposed new Hooper wells (identified as OPH9-1 through OPH9-30). The location and production capacity for each proposed new well are shown in Tables 1 and 2 included as part of this notice. To provide flexibility, SLR requests authorization to drill more than one Simsboro well at a given well site, and/or more than one Hooper well at a given well site, depending upon conditions found at each well site. The intent of the final drilling is that the center of each of the 30 defined well sites is a point midway between the location of each proposed new Simsboro well and the location of the same-numbered proposed new Hooper well. The total combined production capacity of all wells constructed at a given well site that are screened into the same formation will be less than or equal to the maximum instantaneous pumping rate defined for the one well identified in the application for production from that formation at that well site.

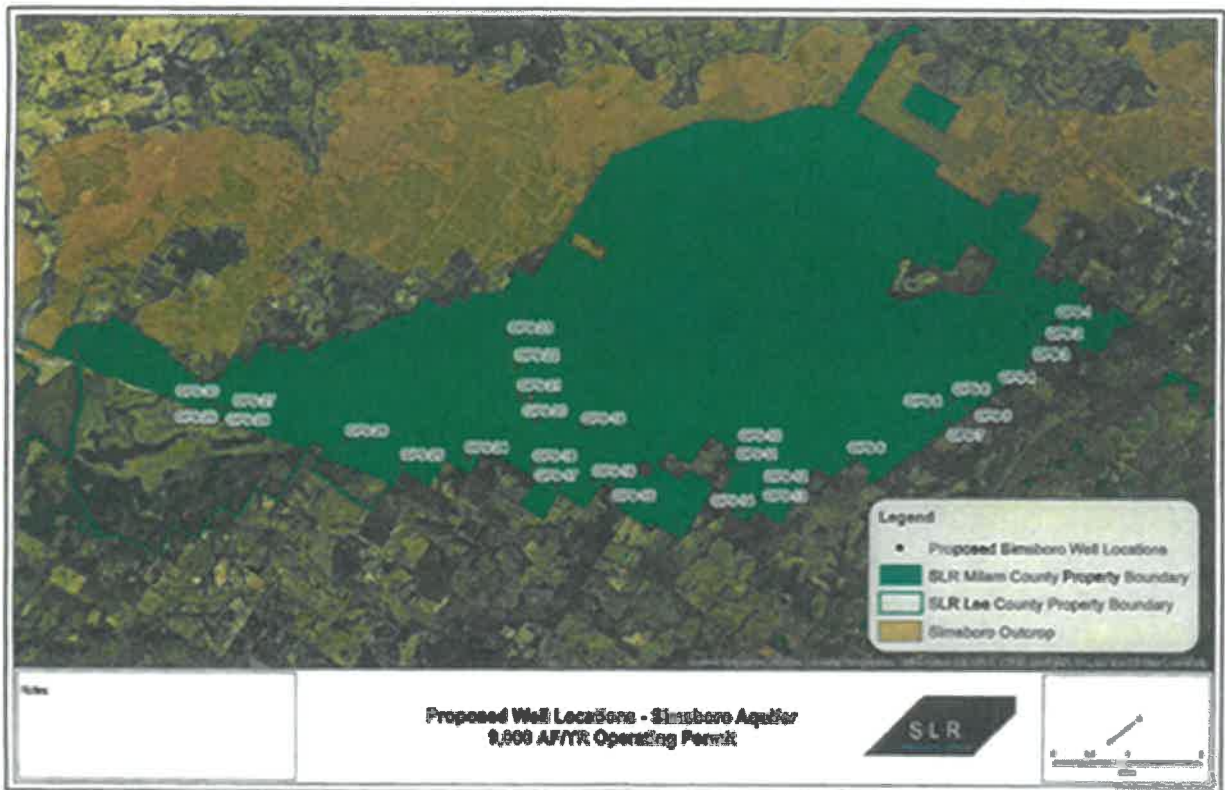

Additionally, SLR seeks a new 15,000 af/yr Simsboro Operating Permit to be used in conjunction with SLR's 15,000 af/yr Simsboro Historic Use Permit No. 0330 ("Permit 0330") for the next fifteen (15) years until Permit No. 0330 ends in 2038, and the remaining 25 years will be solely under the new Operating Permit. As noted in the application, SLR requests that upon issuance of the new 15,000 af/yr operating permit, the entire 15,000 af/yr will be assigned to the Permit 0330 and 0 af/yr per year will be assigned to the new Operating Permit. From time to time thereafter SLR will notify the District of the portion of the 15,000 af/yr assigned to the new Operating Permit and noting the remaining portion of the 15,000 af/yr that will remain assigned to the Permit 0330.

The amount assigned to the Permit 0330 may never be increased above the last amount assigned. Water produced under the new Operating Permit will be pumped from the Simsboro formation using the same 61 wells authorized under the Permit 0330 Figure 3 included as part of this notice shows the locations of the 61 wells authorized under the Permit 0330. The location and approved production capacity for each authorized well under the Permit 0330 are included in Table 3 included as part of this notice. If an authorized well operating at the approved production capacity for water produced under the Permit 0330 does not meet current District property line setback or well spacing regulations for new wells, the District may approve a lower production capacity for water produced from that well under the new 15,000 af/yr Simsboro Operating Permit.

SLR requests that the water produced under the new 9,000 af/yr Simsboro and Hooper Drilling and Operating Permit be used for municipal, industrial, manufacturing and commercial purposes anywhere within Milam and Burleson Counties. Upon assignment of acre feet per year to the new 15,000 af/yr Simsboro Operating Permit and reduced from Permit 0330, SLR requests that the water produced be authorized to be used for municipal, industrial, manufacturing, and commercial purposes anywhere within Milam and Burleson Counties.

Figure 4 included as part of this notice shows the location of SLR’s Milam County property in relation to the City of Rockdale and other cities and towns, Milam County boundaries, and certain roads and highways.

Figure 1 - 30 proposed Simsboro well locations for the 9,000 af/yr Simsboro and Hooper Drilling and Operating Permit.
